

KAS Aptitude and Mental Ability - Complete Revision Guide

Syllabus: arithmetic, data interpretation, logic and analytical reasoning.

1. ARITHMETIC

Percentages: convert fractions and compare successive changes. Profit percentage is profit divided by cost price multiplied by 100.

Ratio and proportion: reduce ratios, use equivalent ratios and unitary method. Average is total divided by observations.

Simple interest = $\text{principal} \times \text{rate} \times \text{time} / 100$. Compare compound and simple interest carefully.

2. WORK AND SPEED

If A finishes in x days, one-day work is $1/x$. Add rates for people working together.

Speed = distance / time. Convert km/h to m/s by multiplying by $5/18$. Use relative speed for trains and boats.

3. DATA

Revise divisibility, HCF, LCM, remainders, fractions, decimals, tables, bar graphs, pie charts and caselets.

4. REASONING

Practise series, analogy, classification, coding, syllogism, statement-conclusion and direction sense.

For blood relations draw a family tree. For seating arrangements mark fixed positions first.

5. STRATEGY

Begin with direct questions, track time and maintain an error log by concept.

Practice: solve a 25-question mixed set daily and repeat weak sets after one week.
